

Quality and environment policy

Biovert, S.L. has decided to integrate the quality and the environment within the management of the company in order to guarantee the design, development, manufacture and commercialization of fertilizers and biostimulants for agriculture, taking into account the requirements and needs of the clients and all the interested parts, with the aim of **being a pioneer company in productive agriculture**.

For this reason, the Management is committed to comply with this policy, the objective of which is a continuous improvement of the effectiveness of the Quality and Environmental Management System, summarised in the following guidelines:

1. To comply with the legal, regulatory, normative and other subscribed requirements that are mandatory, as well as with the contractual requirements, needs and expectations of the interested parties.
2. To design and develop innovative and environmentally friendly products and technologies.
3. To promote our own research into new products and applications, as well as to strengthen collaboration with research centres and universities.
4. Development of Cromptology® technology, our own knowledge management tool, to provide solutions and specialised technical advice for the improvement of agriculture.
5. Prevent pollution that may be generated by our activities, minimising the generation of waste, promoting selective collection and adopting measures to reduce the consumption of natural resources as a commitment to protect the environment.
6. To provide the necessary skills to staff to carry out their duties with a view to excellence in their work and respect for the environment.
7. Promote teamwork, as well as communication and knowledge management among all stakeholders.

Corbins, 19 October 2016

Enric Bonet Villoria
Delegate Councillor
